... i u novim Xorgovima xorg.conf-a uopce nema, jer se sve detektira na startup-u...

ja o ovome nisam nigdje procitao... jel imas neki link za tu informaciju?

Huh?

U zadnje tri distre koje sam imao nisam imao xorg.conf: Fedora 9, Fedora 10 i sada ArchLinux. Sve se dogadja pomocu HAL-a...

<http://wiki.archlinux.org/index.php/Xorg>

Citat:

The latest Xorg often effectively detects hardware with the help of HAL. Therefore, using an xorg.conf is optional now. It may be advantageous to start with no xorg.conf, and simply add sections as required.
