Radila je bez gre¹ke do danas. Jednostavno je stala u sred posla. Na kompu se nije radilo, na ekranu je bio screensaver i svirao je audacious. Postoji li na^einm da saznam ¹to je bilo?

Jo¹ jedno pitanje. Poku¹ao sam skriptu izvesti ru^eno u shellu. Odradila je sve bez problema. Me^utim u djelu u kom detektiram nedjelju kod pokretanja cronom treba pisati Sun, a kod ru^enog Ned. Na kompu mi je ubuntu na hrv. jeziku.

tre^æe, ima li ubuntu ili debian alat za pregledavanje logova kao ¹to ima mandriva?
