Opet skripta stala iz èista mira. Pokrenuo sam je zatim ruèno i pratio u shellu. Odradila je ko 'vicarski sat. Oba zastoja su bila na Ubuntu. Treba li se ostaviti Ubuntu i koristiti ne'to drugo?

Kod oba zastoja stroj nije bio optereæen. A kako sam doraðivao skriptu opet je pejstam. Svaki konstruktivni komentar je dobro do'ao.

Skripta:
