Topic: Interni mailovi (dovecot+postfix)

Subject: Interni mailovi (dovecot+postfix)

Poslao: tplecko

Postano : 13.12.2010 11:23:52

Distribucija je CentOS verzija 5.5

Instalirani su Dovecot, Postfix i Fetchmail

Ne koriste se nikakve baze, niti virtualne domene niti ništa. Postoje samo stvarni korisnici i to je to.

Domena računala je ista kao i domena vani na internetu.

Mailovi izlaze van (direktno preko MX-a), mailovi dolaze nutra (preko fetchmaila)

Interno kada pokušam slat poruke, mail odlazi (iz mail klijenta) nema nikakve greške, ali mail ne stigne na određite.

Ja mislim da mail i stigne na određite, samo ne tamo kamo bi ja da stigne.

dovecot.conf (bitni dijelovi)

protocols = imap imaps pop3 pop3s

login_process_size = 64

mail_location = mbox:~/Maildir:INBOX=/var/mail/%u

postfix/main.cf
