kad pokrenem skriptu ovako to sve izgleda

```
linux:/opt/tqrecv # ./start_satadsl.sh
dvbtune: no process killed
tqrecv: no process killed
dvb0_0: unknown interface: No such device
dvb0_1: unknown interface: No such device
dvb0_2: unknown interface: No such device
```

```

Ovo dotud je normalno jer i ja dobivam iste greske kad dvb sucelja jos nisu podignuta a skripta je

namjestena da ih spusta (dakle nema sto spustiti ako jos nije podignuto) tako da je to OK.

No ovo dalje pokazuje da nesto tu fali:

Citat:

Marko22 je napisao:

Device: /dev/dvb/adapter0/net0

Error: couldn't add interface for pid 1613: 22 Invalid argument.

SIOCSIFADDR: No such device

dvb0_0: unknown interface: No such device

./start_satadsl.sh: line 17: /proc/sys/net/ipv4/conf/dvb0_0/rp_filter: No such file or directory

DVB Network Interface Manager

Version 1.1.0-TVF (Build Thu Oct 21 10:40:20 2004)

Copyright (C) 2003, TV Files S.p.A

Device: /dev/dvb/adapter0/net0

Error: couldn't add interface for pid 1610: 22 Invalid argument.

SIOCSIFADDR: No such device

dvb0_1: unknown interface: No such device

./start_satadsl.sh: line 21: /proc/sys/net/ipv4/conf/dvb0_1/rp_filter: No such file or directory

linux:/opt/tqrecv #

Po svemu tome sudeci meni izgleda kao da dvb driver fali ili jednostavno nije loadiran. No to mi je malo cudno zato sto ako koristis recimo SUSE 10 onda bi ti trebalo automatski detektirati dvb karticu i loadati potrebne module. Nemogu biti siguran da bi to pomoglo no mozda bi bilo dobro reinstalirati cisto SUSE 10 i onda probati. S obzirom da imas SkyStar karticu kao i ja a kod mene je SUSE loadao drivere normalno ne vidim razlog zasto to nebi radilo na SUSE 10 instalaciji.

Druga opcija bi ti bila probati Ubuntu 5.10 Breezy Badger za koji ti sa sigurnoscu mogu reci da radi, so obzirom da se upravo s time spajam. :) Ubuntu isto sam detektira DVB driver i loada module i ti onda samo trebas jos normalnu modemsku vezu i taj tqrecv proxy client za satadsl.

Mozes naruciti CD/DVD za Ubuntu i SUSE na <http://www.mojcd.com>

Ako zelis skinuti mozes skinuti:

Ubuntu na: <http://www.ubuntu.com/download> (lista mirrora)

SUSE na: http://www.opensuse.org/Released_Version

Sretno!

Daniel
